

In the Claims:

Please cancel claims ~~1-5, 7, and 9-15~~, all as shown below. All pending claims are reproduced below, including unchanged claims and marked up versions of amended claims.

1. (Cancelled) A system for designing personalities for synthetic characters, comprising:
a personality trait selection device that displays at least one selectable personality trait; and
a personality builder that groups the selected personality traits into a character profile.

2. (Cancelled) The system according to Claim 1, wherein:
said personality trait selection device comprises at least one trait indicator, each trait indicator
representing an amount of a corresponding one of the selectable personality traits; and

said personality builder weights each selected personality trait in said character profile
according the amount of each selected personality trait represented in the corresponding trait
indicator.

3. (Cancelled) The system according to Claim 1, wherein the trait indicators are graduated
dials operating between a high anchor and a low anchor.

4. (Cancelled) The system according to Claim 1, further comprising:
a personality attribute selection device that displays at least one selectable personality
attribute; and

a mapper configured to map each selected personality attribute into amounts of the trait

C

indicators according to an amount each selected personality attribute is represented in the selectable personality traits.

5. (Cancelled) The system according to Claim 1, wherein the selectable personality traits include at least one primary trait of dominance, warmth, conscientiousness, emotional stability, and openness.

(Previously Amended) A system for designing personalities for synthetic characters, comprising:

a personality trait selection device that displays at least one selectable personality trait, said personality trait selection device comprises at least one trait indicator, each trait indicator representing an amount of a corresponding one of the selectable personality traits;

C1
cont. a personality builder that groups the selected personality traits into a character profile, said personality builder weights each selected personality trait in said character profile according the amount of each selected personality trait represented in the corresponding trait indicator;

a trait indicative behavior selection device that displays at least one selectable trait indicative behavior; and

a mapper configured to map each selected trait indicative behavior into amounts of the trait indicators according to an amount each selected personality attribute is represented in the selectable personality traits.

7. (Cancelled) The system according to Claim 1, wherein said character profile comprises a

translation of the selected personality traits into a weighted set of personality traits.

2.
~~8~~ (Previously Amended)

A system~~/~~ for designing personalities for synthetic characters~~/~~
comprising~~/~~

a personality trait selection device that displays at least one selectable personality trait~~/~~

a personality builder that groups the selected personality traits into a character profile~~/~~ and

a physical modification device configured to modify physical characteristics of said synthetic
character based on the character profile.~~/~~

C
COST
9. (Cancelled) A method of rendering a personality, comprising the step of:

rendering at least one behavior of a synthetic character based on a character profile having
selected personality traits.

10. (Cancelled) The method according to Claim 9, wherein said step of rendering includes the
step of:

specifying at least one trait indicative behavior; and

implementing behaviors consistent with the trait indicative behaviors.

11. (Cancelled) The method according to Claim 10, wherein:

said trait indicative behaviors include at least one primary behavior;

said step of specifying includes the step of specifying a set of releasing mechanisms
associated with the specified primary behaviors; and

42

C

said step of rendering includes the steps of,
interpreting stimuli external to said personality based on said set of releasing mechanisms,
and
rendering said at least one behavior of the synthetic character based on the interpreted
external stimuli.

12. (Cancelled) The method according to Claim 9, wherein said step of rendering comprises
the steps of:

specifying at least one secondary behavior; and
implementing the secondary behaviors as one of persistent and episodic behaviors.

CI
cancel
13. (Cancelled) The method according to Claim 9, wherein said step of rendering comprises
the step of:

modulating an existing behavior based on the character profile.

14. (Cancelled) The method according to Claim 9, wherein said step of rendering comprises
the step of:

modifying a construal process utilized by the personality.

15. (Cancelled) The method according to Claim 14, wherein said construal process
includes processes for perception and assessment of situations in an environment of which the
personality is located.
